Non-Testing for Tin Whisker Growth Position Statement

Fair-Rite has decided to forego the time-consuming test procedures to measure the propensity, if any, of tin whisker growth on the connections of our lead-free components. Fair-Rite has instead chosen to adopt industry-accepted precautions to prevent the formation of tin whisker growth on tin coated wires and terminations. This has been implemented on all lead-free wires and terminations by including a nickel barrier layer and a matte 100% tin coating surface layer.
